EXECUTIVE SUMMARY

Your Business at a Glance

This report is your personal business guide. It was created from the numbers you entered into VunaMentor. Everything here is about **your** shop — what you sell, how much you earn, and what to watch out for. Read it carefully, keep it somewhere safe, and refer back to it whenever you make a big decision.

Average profit per item sold

1,200 UGX

per item

Monthly net profit

38,000 UGX

after all costs

Safe take-home this month

30,400 UGX

80% of profit

Weekly items to sell

30 items

across 3 products

Monthly sales target

99 items

to cover all costs

Startup recovery time

~13 months

at current profit pace

■ What this means for you

You are running a healthy small retail business. You sell three products — Colgate, Pads, and Sugar — and each week you make about **36,000 UGX in gross profit** before costs. After paying rent, transport, and supplies, your monthly take-home is **30,400 UGX**. Your business is on track. Keep restocking regularly, watch your costs, and avoid taking more than 30,400 UGX out of the business each month.

SECTION 1

Your Products and What They Earn

You currently sell **three products**. Each one has a buying price (what you pay the supplier) and a selling price (what your customer pays you). The difference between those two numbers is called your **profit per item** — that is the money you keep for each unit sold.

Sugar is your **highest-volume product** — you sell 15 units a week. Colgate gives you the **highest profit per item** at 1,900 UGX each. Pads sell the fewest units but still contribute a steady 5,000 UGX to your weekly income. Together, these three products bring in **135,000 UGX in weekly sales revenue**.

Product	Buy Price (UGX)	Sell Price (UGX)	Profit per Item	Units /Week	Weekly Profit (UGX)
Colgate	3,100	5,000	1,900 UGX	10	19,000
Pads	4,000	5,000	1,000 UGX	5	5,000
Sugar	3,200	4,000	800 UGX	15	12,000
TOTAL / AVERAGE	-	-	1,200 UGX avg	30	36,000

Buying vs. Selling Price — Visual Comparison

The chart below shows how much you pay versus how much you receive for each product. The wider the gap between the two bars, the more profit you make per sale.

■ Insight: Colgate is your best earner per item

Even though Sugar sells the most units, Colgate makes you 1,900 UGX profit per sale — more than double Sugar's 800 UGX. If you can sell more Colgate, your total weekly profit will grow faster without needing to increase your overall stock volume.

SECTION 2

Your Monthly Costs

Every business has two kinds of costs: money you spend to **buy goods to sell** (called restock costs), and money you spend to **keep the business running** (called running costs). Both come out of your sales money before you can call anything profit.

Monthly Running Costs	Amount (UGX)	Monthly Restock Costs	Amount (UGX)
Shop rent	100,000	Colgate (10/wk × 4wks × 3,120) × 4	124,800
Bags & receipts	4,000	Pads (5/wk × 4wks × 4,000) × 4	80,000
Utilities (power/water)	10,000	Sugar (15/wk × 4wks × 3,200) × 4	192,000
Transport to supplier	4,000	Buffer stock / rounding	33,000
Total running costs	118,000	Total restock	429,000

Your **total monthly cost** is **547,000 UGX** — that is 429,000 UGX to restock your goods plus 118,000 UGX to run the shop. Your monthly sales revenue is 585,000 UGX, which leaves you with **38,000 UGX net profit** each month.

■ Watch out: Rent is your biggest running cost

Shop rent at 100,000 UGX makes up **85% of your monthly running costs**. If your rent increases, your profit will shrink quickly. Always negotiate your rent before renewing, and consider whether sales volume can be increased to absorb any rise.

Monthly Money Flow — From Sales to Profit

This chart shows where your sales money goes each month. The green bar on the left is what you earn. The red and orange bars show what gets spent. The dark green bar on the right is what remains as profit.

SECTION 3

Your Monthly Sales Target

A sales target is the **minimum number of items you must sell** in a month just to cover all your costs and keep the business going. It is not your goal — it is your **floor**. Anything you sell above this number adds to your profit.

How the Target is Calculated		Amount
Total monthly running costs	÷	118,000 UGX
Average profit per item sold	÷	1,200 UGX
Monthly sales target	=	99 items / month

You need to sell approximately **99 items every month** to cover your running costs. That breaks down to about **25 items per week**, or roughly **4 items per day**. You are currently selling 30 items per week — which means you are **already exceeding your target** and generating profit every month.

Current weekly sales	Needed per week (min)	Target reached by
----------------------	-----------------------	-------------------

■ **You are ahead of your target**
At 30 items per week, you reach your monthly sales target by around Day 23 of each month. The last week of every month is essentially bonus profit. Use that extra money wisely — either reinvest it in stock or set it aside for slow months ahead.

Getting Your Startup Money Back

Startup Costs Breakdown	Amount (UGX)
Business licence (one-time fee)	80,000
First month of stock / supplies	429,000
Total startup investment	509,000

Recovery Progress Timeline

Taking out more money than your safe take-home amount will **slow down your recovery** and may leave the business without enough cash to restock. Stick to the safe limits in Section 5 until you have recovered your startup investment.

SECTION 5

What You Can Safely Take Home

Your business is not a salary. It is a living thing that needs money to survive and grow. If you take out too much, you may not have enough to restock, pay rent, or handle a slow week. VunaMentor calculates a **safe take-home amount** — the maximum you can withdraw without putting the business at risk.

Monthly Money Breakdown	Amount (UGX)
Monthly sales revenue	585,000
Minus: Monthly restock cost	(429,000)
Minus: Monthly running costs	(118,000)
Monthly net profit	38,000
Minus: 20% safety buffer (kept in business)	(7,600)
Safe amount to take home	30,400

The **20% safety buffer** is money you leave in the business every month. It is your cushion for unexpected situations — a slow week, a price increase from your supplier, or an urgent repair. It is **not lost**; it stays in the business and builds up over time as your emergency fund.

Safe to take home / month 30,400 UGX	Safe to spend / week 7,015 UGX ÷ 4.33 weeks	Safe to spend / day 999 UGX ÷ 30 days
Keep in business / month 7,600 UGX safety buffer 20%	Keep in business / week 1,754 UGX ÷ 4.33 weeks	Keep in business / day 250 UGX ÷ 30 days

■ Think of 999 UGX/day as your personal daily wage from this business

If you need more personal income, the answer is not to take more from the business — it is to **grow the business** by selling more items or adding a fourth product. Growing your weekly sales from 30 to 40 items would increase your monthly profit significantly without changing your cost structure.

SECTION 6

Your Pricing Options

Your current prices are working — but you have room to adjust them if you want to increase your profit or recover your startup money faster. VunaMentor gives you three clear pricing options: **Low, Medium, and High**. Each option applies a single, consistent multiplier across all your products so your pricing stays fair and predictable to customers.

Option	Multiplier	Colgate Sell (UGX)	Pads Sell (UGX)	Sugar Sell (UGX)	Est. Monthly Profit (UGX)	Recommended?
Low (current)	×1.00	5,000	5,000	4,000	38,000	✓ Good if competitive
Medium	×1.10	5,500	5,500	4,400	~56,000	★ Recommended
High	×1.20	6,000	6,000	4,800	~74,000	Use if low competition

The **Medium pricing option (×1.10)** is the most balanced choice. It adds a 10% increase on every item — for example, Colgate moves from 5,000 to 5,500 UGX. This small increase is unlikely to drive customers away, but it would raise your estimated monthly profit from 38,000 to approximately **56,000 UGX** — an improvement of almost 50%.

The **High pricing option (×1.20)** gives you the fastest profit growth, but it comes with a risk: if nearby shops sell the same goods cheaper, your customers may go there instead. Only use the High option if you know your competition well.

■ Pricing tip: Test before you commit

Before raising all prices at once, try raising just one product — for example, increase Colgate from 5,000 to 5,500 UGX for two weeks and observe whether customers still buy at the same rate. If they do, you can safely apply the increase to all items.

SECTION 7

Your Next Steps — Action Plan

Knowing your numbers is the first step. Acting on them is what grows your business. Below is a simple action plan based on your VunaMentor report.

This Week	Track your daily sales Write down every item you sell each day. After 7 days, check whether you reached your weekly target of 30 items. This habit will tell you quickly if something is wrong.
This Month	Stay within your take-home limit Do not withdraw more than 30,400 UGX this month. Leave the 7,600 UGX safety buffer in the business. Check your cash at the end of the month.
Next 3 Months	Test a price increase on one product Choose Colgate and raise the price from 5,000 to 5,500 UGX. Watch your sales for two weeks. If customers still buy, apply the same increase to Pads.
Within 6 Months	Consider adding a fourth product Once you are comfortable with your cash flow, look for a fourth item that your customers often ask for. Adding one product with 1,000+ UGX profit per item could add 15,000–20,000 UGX to your monthly profit.
Within 13 Months	Celebrate recovering your startup investment At your current pace, by Month 13 your business will have fully paid back your 509,000 UGX startup cost. At that point, consider reinvesting a portion of your profit back into growing your stock.

■ Remember: Small, consistent actions beat big, irregular ones

You do not need to change everything at once. Track your numbers weekly, stay within your take-home limit, and make one small improvement each month. Over 13 months, those small steps will recover your startup investment and build a stable business.

ABOUT THIS REPORT

How VunaMentor Works

VunaMentor is the business planning tool built into **VunaBooks**, Uganda's small business accounting and advisory platform at **plan.vunabooks.com**. This report was generated automatically from the numbers you entered in Simple Mode.

Simple Mode is designed for business owners who are **new to financial planning** or who prefer plain-language guidance over technical accounting terms. All calculations in this report use standard retail business formulas.

Disclaimer

*This report is based entirely on the numbers you entered. VunaMentor does not verify prices, sales volumes, or costs with external sources. If your real numbers change — for example, if your rent increases or you start selling more items — you should update your VunaMentor plan to get a new report. This document is for **guidance only** and does not constitute professional financial or legal advice.*
